Indiana - Net Metering Service

Customer Information Package

An AEP Company

BOUNDLESS ENERGY"

Net Metering - The means of measuring the difference between the electricity supplied by an electric utility and the electricity generated from renewable energy resource facility owned and operated by an electric retail customer when any portion of the electricity generated by the renewable energy resource facility is used to offset part or all of the electric retail customer requirements for electricity.

This document is intended to provide documents for commonly installed inverter-based photovoltaic and/or wind turbine generating systems (10 kW or less) that may qualify for Net Metering Service. Documents for larger systems may be requested from Shari Konger (DGCoordinator I&M@aep.com) at 260-408-3402.

The enclosed Net Metering Service Rider provides detailed information regarding availability of the service, charges, metering, conditions of service, and technical requirements.

Company approval of connecting a generator to its distribution system is required.

Summary of the process:

- 1. A completed Interconnection Application is submitted to the Company.
- 2. Company reviews Application.
- 3. Company will notify customer of approval or disapproval of interconnection and provide any applicable conditions.
- 4. Company executes Interconnection Agreement thereby granting the customer the right to operate the generator connected to the AEP system.
- 5. Company may conduct on-site inspections to verify the proper installation and continuing safe operations of the generating facilities.

(Note: Some documents within are dated and subject to change. It may be necessary to contact the Company for the latest documents.)

Application Check List

Interconnection Application – Category 1 (inverter based, 10 kW or less)

Application Checklist

- Completed (and signed) Application
- Attached product literature confirming that a nationally recognized testing and certification lab has listed the equipment.
- Attached electrical one-line diagram of proposed installation
- Attached Site Plan
- Attached "Certificate of Liability Insurance" (minimum \$100,000 coverage)

I.U.R.C. NO. 16 INDIANA MICHIGAN POWER COMPANY STATE OF INDIANA

RIDER NMS (Net Metering Service Rider)

Availability of Service

This rider is available to customers in good standing who own and operate an eligible net metering renewable energy resource such as solar photovoltaic, wind, biomass, or hydro electrical generating facility designed to operate in parallel with the Company's system. Customers served under this rider must also take service from the Company under the otherwise applicable standard service tariff.

The total rated generating capacity of all net metering customers served under this rider shall be limited to one and one half percent (1.5%) of the Company's most recent Indiana aggregate summer peak load. At least forty percent (40%) of the capacity is reserved solely for participation by residential customers and fifteen percent (15%) of the capacity is reserved for organic waste biomass resources as defined in IC 8-1-37-4(a)(5). Service under this rider shall be available to customers on a first come, first served basis.

Conditions of Service.

- 1. For purposes of this rider, an eligible net metering facility is an electrical generating facility that complies with all of the following requirements:
 - (a) is fueled by a renewable energy resource as defined in IC 8-1-37-4(a)(1) through IC 8-1-37-4(a)(1)(8) such as solar photovoltaic, wind, biomass, or hydroelectric energy;
 - (b) has a nameplate capacity less than or equal to 1 MW;
 - (c) is owned and operated by the customer and is located on the customer's premises;
 - (d) is intended primarily to offset all or part of the customer's own electrical load requirements; and
 - (e) is designed and installed to operate in parallel with the Company's system without adversely affecting the operation of equipment and service of the Company and its customers and without presenting safety hazards to Company and customer personnel.
- 2. A customer seeking to interconnect an eligible net metering facility to the Company's system must submit to the Company's designated personnel a completed Application for Interconnection with the Indiana Michigan Power Company Distribution System and a one-line diagram showing the configuration of the proposed net metering facility. The Company will provide copies of all applicable forms upon request.
- An Addendum to Contract for Electric Service between the Company and the net metering customer must be executed before the net metering facility may be interconnected with the Company's system. (Cont'd on Sheet No. 33.1)

ISSUED BY TOBY L. THOMAS PRESIDENT FORT WAYNE, INDIANA EFFECTIVE FOR ELECTRIC SERVICE RENDERED ON AND AFTER JANUARY 1, 2018

(Cont'd from Sheet No. 33)

- 4. Customer-owned generator equipment and installations must comply with the Company's Technical Requirements described in this tariff.
- 5. The net metering customer shall provide the Company proof of qualified installation of the net metering facility. Certification by a licensed electrician shall constitute acceptable proof.
- 6. The net metering customer shall install, operate, and maintain the net metering facility in accordance with the manufacturer's suggested practices for safe, efficient, and reliable operation in parallel with the Company's system.
- 7. The Company may, at its own discretion, isolate any net metering facility if the Company has reason to believe that continued interconnection with the net metering facility creates or contributes to a system emergency. System emergencies causing discontinuance of interconnection shall be subject to verification at the Commission's discretion.
- 8. The Company may perform reasonable on-site inspections to verify the proper installation and continuing safe operation of the net metering facility and the interconnection facilities, at reasonable times and upon reasonable advance notice to the net metering customer.
- 9. A net metering customer operating a net metering facility shall maintain homeowners, commercial, or other insurance providing coverage in the amount of at least one hundred thousand dollars (\$100,000) for the liability of the insured against losses or damages arising from the use of the customer's net metering facility. The customer must submit evidence of such insurance to the Company with the Interconnection Application. The Company's receipt of evidence of liability insurance does not imply an endorsement of the terms and conditions of the coverage.
- 10. The Company and the net metering customer shall indemnify and hold the other party harmless from and against all claims, liability, damages, and expenses, including attorney's fees, based on any injury to any person, including loss of life, or damage to any property, including loss of use thereof, arising out of, resulting from, or connected with, or that may be alleged to have arisen out of, resulted from, or connected with an act or omission by such other party, its employees, agents, representatives, successors, or assigns in the construction, ownership, or maintenance of such party's facilities used in net metering. This indemnification provision is not applicable in the case of government net metering customers that are restricted from entering into indemnification provisions.

(Cont'd on Sheet No. 33.2)

EFFECTIVE FOR ELECTRIC SERVICE RENDERED ON AND AFTER FEBRUARY 28, 2013

ISSUED UNDER AUTHORITY OF THE INDIANA UTILITY REGULATORY COMMISSION DATED FEBRUARY 13, 2013 IN CAUSE NO. 44075

ISSUED BY PAUL CHODAK III PRESIDENT FORT WAYNE, INDIANA

(Cont'd from Sheet No. 33.1)

Metering.

One of the following metering options, if not already present, shall be installed on the net metering customer's premises by the Company to properly record the net kWh of a net metering facility:

- (1) One main watt-hour meter capable of measuring the net flow of energy.
- (2) One main watt-hour meter measuring the flow of energy to the net metering customer and a second watt-hour meter measuring the flow of energy to the Company. The reading of the second meter will be subtracted from the reading of the main meter to obtain a measurement of net kWh for billing purposes.

The Company may install one or more additional meters to monitor the flow of electricity.

Monthly Charges and Billing.

Monthly charges for energy, and demand where applicable, to serve the customer's net or total load shall be determined according to the Company's standard service tariff under which the customer would otherwise be served, absent the customer's eligible net metering facility. Energy charges under the customer's standard tariff shall be applied to the customer's net energy for the billing period to the extent that the net energy exceeds zero. If the customer's net energy is zero or negative during the billing period, the customer shall pay only the non-energy usage portions of the standard tariff bill. If the customer's net energy is negative during a billing period, the net metering customer shall be credited in the next billing period for the kWh difference. When the net metering customer elects to no longer take service under this Net Metering Service Rider, any unused credit shall revert to the Company.

Contract.

A written agreement may, at the Company's option, be required to fulfill the provisions of Items 2, 14, and/or 17 of the Company's Terms and Conditions of Service.

Special Terms and Conditions.

This rider is subject to the Company's Terms and Conditions of Service and all provisions of the standard service tariff under which the customer takes service. This rider is also subject to provisions of the Company's Net Metering Tariff Technical Requirements.

(Cont'd on Sheet No. 33.3)

ISSUED BY PAUL CHODAK III PRESIDENT FORT WAYNE, INDIANA EFFECTIVE FOR ELECTRIC SERVICE RENDERED ON AND AFTER FEBRUARY 28, 2013

I.U.R.C. NO. 16 INDIANA MICHIGAN POWER COMPANY STATE OF INDIANA

RIDER NMS (Net Metering Service Rider)

(Cont'd from Sheet No. 33.2)

Technical Requirements.

These technical requirements relate to the interconnection of a net metering facility to the Company's distribution system. Interconnection enables the net metering facility to operate in parallel with the Company's distribution system. Inverter based systems listed by Underwriters Laboratories (UL) to UL standard 1741 published May 7, 1999, as revised January 28, 2010 (UL 1741) will be accepted as meeting the technical interconnection requirements tested by UL 1741. Non-inverter based systems and interconnection requirements not tested by UL 1741 shall comply with standard, IEEE 1547, "Standard for Interconnecting Distributed Resources with Electric Power Systems." IEEE publications are available from the Institute of Electrical and Electronics Engineers, 443 Hoes Lane, P. O. Box 1331, Piscataway, NJ 08855-1331 (http://standards.ieee.org/). Since UL 1741 and IEEE 1547 do not address planning, designing, operating, or maintaining the utility's distribution system nor all of the potential system impacts the proposed net metering facility may create beyond the point of common coupling, certain additional technical requirements are contained herein.

These technical requirements are supplementary to and do not intentionally conflict with or supersede applicable laws, ordinances, rules, or regulations established by Federal (including all applicable safety and performance standards of the National Electrical Code), State, and other governmental bodies. The customer proposing to install a net metering facility is responsible for conforming to all applicable laws, ordinances, rules, or regulations established by Federal, State, and other governmental bodies.

The Company will provide the screening of all interconnection applications and, if necessary, an interconnection study to determine the impact of the net metering facility on the Company's distribution system beyond the point of common coupling.

To assure that the safety, reliability, and power quality of the distribution system is not degraded by the interconnection of the net metering facility:

- (1) The net metering facility shall comply with these technical requirements.
- (2) Any new distribution system facilities, distribution system modifications, and/or modifications to the net metering facility identified by the interconnection study shall be completed prior to interconnection.
- (3) The net metering facility shall be operated and maintained as agreed upon by the parties.

(Cont'd on Sheet No. 33.4)

ISSUED BY PAUL CHODAK III PRESIDENT FORT WAYNE, INDIANA EFFECTIVE FOR ELECTRIC SERVICE RENDERED ON AND AFTER FEBRUARY 28, 2013

(Cont'd from Sheet No. 33.3)

Data for all major equipment proposed by the customer to satisfy the technical requirements must be submitted for review by the Company with the completed Interconnection Application. The use of pre-certified equipment will facilitate the Company's review. Pre-certified equipment has been tested and certified by recognized national testing laboratories (i.e., UL 1741) as suitable for interconnection with a distribution system based upon compliance with IEEE Standard 1547. Suitability for interconnection does not imply that pre-certified equipment may be interconnected without a study to determine system impact. The Company will endeavor to timely communicate the results of its review and study to the customer.

The interconnection system hardware and software design requirements in the technical requirements are intended to assure protection of the Company's distribution system. Any additional hardware and software necessary to protect equipment at the net metering facility is solely the responsibility of the customer to determine, design, and apply.

If an interconnection transformer is required, the transformer must comply with the applicable current ANSI Standard from the C57.12 series of standards that specifies the requirements for transformers. ANSI publications are available from the Sales Department, American National Standards Institute, 25 West 43rd Street, 4th Floor, New York, NY 10036 (http://www.ansi.org/). An interconnection transformer would typically be required when the voltage at the point of common coupling is greater than 480 volts and the customer's electrical system design dictates. If required, the cost and ownership of the interconnection transformer shall reside with the customer.

The transformer should have voltage taps on the high and/or low voltage windings sufficient to assure satisfactory generator operation over the range of voltage variation expected on the Company's distribution system. The customer needs to assure sufficient voltage regulation at its facility to maintain an acceptable voltage level for its equipment during such periods when its net metering facility is off line.

If a main circuit breaker (or circuit switcher) between the interconnection transformer and the Distribution System is required, the device must comply with the applicable current ANSI Standard from the C37 series of standards that specifies the requirements for circuit breakers, reclosers, and interrupting switches. An interconnection circuit breaker would typically be required when the voltage at the point of common coupling is greater than 480 volts and the customer's electrical system design dictates. If required, the cost and ownership of the interconnection circuit breaker shall reside with the customer.

Any circuit breaker (or circuit switcher) must have adequate interrupting capability for the maximum expected short circuit duty. The Company will provide information identifying the contribution from the electric system to faults at the proposed site.

(Cont'd on Sheet No. 33.5)

ISSUED BY PAUL CHODAK III PRESIDENT FORT WAYNE, INDIANA EFFECTIVE FOR ELECTRIC SERVICE RENDERED ON AND AFTER FEBRUARY 28, 2013

(Cont'd from Sheet No. 33.4)

A disconnecting device must be located at the point of common coupling for all interconnections. For three-phase interconnections, the disconnecting device must be gang operated. The disconnecting device must be accessible to Company personnel at all times and be suitable for use by the Company as a protective tagging location. The disconnecting device shall have a visible open gap when in the open position and be capable of being locked in the open position. The cost and ownership of the main disconnect switch shall reside with the customer.

The device must comply with the applicable current ANSI Standard from the C37 series of standards that specifies the requirements for circuit breakers, reclosers, and interrupting switches.

The closest available system voltage as well as equipment and operational constraints influence the chosen point of interconnection. The Company will consult with the customer to determine the acceptability of a particular interconnection point.

For situations where the customer's net metering facility will only be operated in parallel with the Company's distribution system for a short duration (less than 100 milliseconds), as in a make-before-break automatic transfer scheme, the requirements of IEEE 1547 do not apply except as noted in Clause 4.1.4.

The customer is responsible for operating the proposed net metering facility such that the voltage unbalance attributable to the net metering facility shall not exceed 2.5% at the point of common coupling. Voltage unbalance is the maximum phase deviation from average as specified in ANSI C84.1.

The Company reserves the right to witness compliance testing at the time of installation and maintenance testing of the interconnection system for compliance with these technical requirements.

The customer is responsible for establishing a program for and performing periodic scheduled maintenance on the net metering facility's interconnection system (relays, interrupting devices, control schemes, and batteries that involve the protection of the Company's distribution system). A periodic maintenance program is to be established in accordance with the requirements of IEEE 1547. The Company may examine copies of the periodic test reports or inspection logs associated with the periodic maintenance program. Upon the Company's request, the Company shall be informed of the next scheduled maintenance and be able to witness the maintenance performed and any associated testing.

The Company reserves the right, at the Company's expense, to install special test equipment as may be required to perform a disturbance analysis and monitor the operation and control of the net metering facility to evaluate the quality of power produced by the net metering facility.

ISSUED BY PAUL CHODAK III PRESIDENT FORT WAYNE, INDIANA EFFECTIVE FOR ELECTRIC SERVICE RENDERED ON AND AFTER FEBRUARY 28, 2013

INDIANA MICHIGAN POWER COMPANY INTERCONNECTION AND PARALLEL OPERATING AGREEMENT FOR PROJECTS –1000 kW OR LESS

This Interconnection and Parallel Operating Agreement ("Agreement") is entered into on ______ by **Indiana Michigan Power Company** (the "Utility"), and ______(the "Customer"), and (if applicable under Paragraph 5) ______ (the "Property Owner"). Utility and Customer are sometimes also referred to in this Agreement collectively as "Parties" or individually as "Party."

I. RECITALS

- A. Customer is an electric service customer of Utility in good standing and has submitted a Generator Interconnection Application ("Application") to Utilit
- B. Customer desires to interconnect an electric generating facility with maximum capacity of 1000 kilowatts ("kW") or less (the "Customer Facility" with Utility's electric distribution system and operate the Customer Facility in variable with Utility's distribution system.
- C. For purposes of this Agreement, "intercom ablisl a connection between a non-utility generating resource (in er Facility) and Utility's case. he distribution system. "Operate in parall ' mean enerating electricity from a non-utility at is connected to Utility's system. In all resource (in this case, the Custome Facih cases, terms shall have the meaning lefine n the Standards.
- D. Interconnection of the Curponer Fac ity with Utility's distribution system is subject to this Agreement, the Apph the atterconnection Requirements, the Standards and applicable utility tariffs approved by a undiana Utility Regulatory Commission.
- E. This Agreement data not blress any purchase or sale of electricity between Utility and Customer nor does at criste and agency, partnership, joint venture or other business arrangement between among Utility, Customer and/or Property Owner.

II. AGREEMENT

NOW THEREFORE, in consideration of the above recitals, the mutual covenants contained herein and for good and valuable consideration, the Parties agree as follows:

1. **Description of Customer Facility**

The Customer Facility must be built with the following ratings, which shall not 1.1 be changed without thirty (30) days advance written notice to Utility according to the notice requirements herein:

| Wind Turbine (WT) Rating: | |
|------------------------------------|-------------|
| Hydroelectric Turbine (HT) Rating: | |
| Fuel Cell (FC) Rating: | |
| Other (specify type and rating): | |
| Service Type: Single Phase | Three Phase |
| Voltage Level: 120/240 | |
| Equipment Specifications: Make: | : Model: |

1.2

owner o If Customer is not the operty identified above, the Property Owner must sign this Ag for the purposes indicated in Paragraph 5.

- account number: 1.3 Customer tility servi Property Q ility se ice account number (if applicab
- The Customer facility is planned to be ready for parallel operation on or about: 1.4

Interconnection cilities 2.

If it is necessary for Utility to install certain interconnection facilities ("Interconnection Facilities") and make certain system modifications in order to establish an interconnection between the Customer Facility and Utility's distribution system, the Interconnection facilities and modifications shall be described to the Customer.

3. **Design Requirements, Testing and Maintenance of Customer Facility**

Customer shall be responsible for the design and installation of the Customer 3.1 Facility and obtaining and maintaining any required governmental authorizations and/or permits, which may include, but shall not be limited to, easements to clear trees, and necessary rights-of-way for installation and maintenance of the Utility Interconnection Facilities. Customer shall reimburse Utility for its costs and expenses to acquire such easements / permits.

- 3.2 Customer shall, at its sole expense, install and properly maintain protective relay equipment and devices to protect its equipment and service, and the equipment and system of Utility, from damage, injury or interruptions, and will assume any loss, liability or damage to the Customer Facility caused by lack of or failure of such protection. Such protective equipment specifications and design shall be consistent with the applicable Interconnection Requirements. Prior to the Customer Facility operating in parallel with Utility distribution system, Customer shall provide satisfactory evidence to Utility that it has met the Interconnection Requirements, including but not limited to the receipt of approval from the local building/electrical code inspector.
- 3.3 At its own expense, Customer shall perform operational testing at least five (5) days prior to the installation of any Interconnection Facilities by Utility. Utility may send qualified personnel to the Customer Facility or inspect the facility and observe the testing. Upon completion of such testing and inspection and prior to interconnection Customer shall provide Utility with a written report explaining all test results, including a copy of the generator community coning test report.

Protective relay equipment shall be te ed every two years (unless an extension is agreed to by Utility) to verify calibration indicated on the latest relay setting document issued by of such tests shall be resul Utility may, at any time provided to Utility in writing for eview id app and at its sole expense, inspec nd test he Customer Facility to verify that the vice, properly maintained, and calibrated required protective equipp nt is to provide the intended pr s inspection may also include a review of on. Customer's pertinent record pecti testing and/or approval by Utility or g and/or approval by Utility pursuant to this the omission of ar nspectio tes Agreement shall Customer of any obligations or responsibility assumed under this A eme

3.4 Customer wall of the and maintain the Customer Facility in a safe and prudent manner and in contonic ice with all applicable laws and regulations. Customer shifts obtain maintain any governmental authorizations and permits required for construction and operation of the Customer Facility.

4. Discol non

Utility shall contitled to disconnect the Customer Facility from Utility's distribution system, or otherwise refuse to connect the Customer Facility, if: (a) Customer has not complied with any one of the technical requirements contained in the applicable Interconnection Requirements, (b) the electrical characteristics of the Customer Facility are not compatible with the electrical characteristics of Utility's distribution system, (c) an emergency condition exists on Utility's distribution system, (d) Customer's protective relay equipment fails, (e) Utility determines that the Customer Facility is disrupting service to any Utility customer, (f) disconnection is required to allow for construction, installation, maintenance, repair, replacement, removal, investigation, inspection or testing of any part of Utility's facilities, (g) if a required installation (*e.g.*, telephone line) fails or becomes incapacitated and is not repaired in a timely manner, as determined by Utility, or (f) Customer commits a material breach of this Agreement.

5. <u>Access to Property</u>

- 5.1 At its own expense, Customer shall make the Customer Facility site available to Utility. The site shall be free from hazards and shall be adequate for the operation and construction of the Interconnection Facilities. Utility, its agents and employees, shall have full right and authority of ingress and egress at all reasonable times on and across the property at which the Customer's Facility is located, for the purpose of installing, operating, maintaining, inspecting, replacing, repairing, and removing the Interconnection Facilities. The right of ingress and egress shall not unreasonably interfere with Customer's or (if different) Property Owner's use of the property.
- 5.2 Utility may enter the property on which the Customer Facility is located to inspect, at reasonable hours, Customer's protective vices and read or test meters. Utility will use reasonable efforts to preside Customer or Property Owner, if applicable, at least 24 hours' notice price to entry as and property, in ty to reprive any locks order to afford Customer or Property Owner the oppo Utili may enter the or other encumbrances to entry; provided, however, the property without notice (removing, at stomer's expen inv lock or other encumbrance to entry) and disconnect the nterconnection Facilities if Utility believes that disconnection is nece s a b ardous condition and/or ade to protect persons, Utility's faci of others from damage or les, or e pro interference caused by Custom Facil
- 5.3 By executing this Agreem 1, Proper Owner consents to and agrees to provide access to its property on which the Contomer Facility is located to Utility as described in this action, but does not assume or guarantee other performance obligations of the other pruner this Agreement.

6. Indemnity and Levility

- 6.1 the negligence or intentional wrongdoing of the other Unless cau d b each I to this Agreement shall at all times assume all liability for, and shall defend, old harmless, and indemnify the other Party and its directors, ees, and agents from, any and all damages, losses, claims, offic pld mands, s ts, recoveries, costs, legal fees, and expenses: (a) for injury to or death of a person or persons whomsoever occurring on its own system, or (b) oss, destruction of or damage to any property of third persons, firms, for corporations or other entities occurring on its own system, including environmental harm or damage, or (c) arising out of or resulting from, either directly or indirectly, its own Interconnection Facilities, or (d) arising out of or resulting from, either directly or indirectly, any electric energy furnished to it hereunder after such energy has been delivered to it by such other Party. The provisions of this Section shall survive termination or expiration of this Agreement.
- 6.2 The provisions of this Section 6 shall not be construed to relieve any insurer of its obligations to pay any insurance claims in accordance with the provisions of any valid insurance policy.

6.3 Notwithstanding anything in this Section, or any other provision of this Agreement to the contrary, any liability of a Party to the other Party shall be limited to direct actual damages, and all other damages at law or in equity are hereby waived. Under no circumstances shall a Party be liable to the other Party, whether in tort, contract or other basis in law or equity for any special, indirect, punitive, exemplary or consequential damages, including lost profits. The indemnification obligations and limits on liability in this Section shall continue in full force and effect notwithstanding the expiration or termination of this Agreement, with respect to any event or condition giving rise to an indemnification obligation that occurred prior to such expiration or termination.

7. Breach and Default

A breach of this Agreement ("Breach") shall occur upon the fa re of a Party to perform or observe any material term or condition of this Agreem it, if the Standards or the Interconnection Requirement. Upon a Breach by one Part, the nor reaching Party shall give written notice of such Breach to the breaching Party. Th cy in Breach shall have a Br ch is not cured 30 days from the date of the written notice to cure the Breach. within the 30-day period provided for herein, the Party in Bread all be deemed in default ("Default"). The non-defaulting Party shall be have the right to terminate this Agreement by written notice, shall be relie gations hereunder, and ther a any may pursue any and all remedies available ty. to it at w or

8. **Governing Law and Utility Tarif**

This Agreement shall be interpreted go orned, and construed under the laws of Indiana. In addition, this Agreement shall be given ad by the terms and conditions as set forth in Utilities' Tariff CO-GEN a work let Matering Service Rider, as applicable.

9. Amendment, Medication or Univer

noď can to this Agreement shall be in writing and agreed to by Any amendments of both Part The fai of any Party at any time to require performance of any provision er affect its right at a later time to enforce the same. No waiver hereof hall in no mar h of any term or covenant contained in this Agreement, whether by ar Party rea by con or othe wise, shall be deemed to be construed as a further or continuing waiver of any such breach or a waiver of the breach of any other term or covenant unless such waive. writing.

10. Notices

Any notice required under this Agreement shall be in writing and mailed or personally delivered to the Party at the address below. Written notice is effective within 3 days of depositing the notice in the United States mail, first class postage prepaid. Personal notice is effective upon delivery. Written notice of any address changes shall be provided. All written notices shall refer to the Customer's Utility account number, as provided in Section 1 of this Agreement. All written notices shall be directed as follows:

Notice to <u>Utility</u>: <u>Customer Services Department</u> <u>Indiana Michigan Power</u>

Notice to <u>Customer</u>:

Notice to Property Owner (if different than Customer):

11. Term of Agreement and Termination

This Agreement shall become effective up a consultation by all farties and, if applicable, the Property Owner, and it shall continue in full brice and affect until terminated upon thirty (30) days' prior notice by either arty, up a Default of either Party as set forth in Section 7, upon mutual agreement of the notice, or upon a change in ownership of either the Customer Facility or the property of the the Customer Facility is located absent a valid assignment under Section 14.

12. Entire Agreement

This Agreement subscedes all poor discussions and agreements between the Parties with respect to the subject here and constitutes the entire agreement between the Parties hereto.

13. No That Party Bene viary

The term and provisions of this Agreement are intended solely for the benefit of each Party, and it is not the intention of the Parties to confer third-party beneficiary rights upon any other particular or entity.

14. Assignment and Binding Effect

This Agreement shall not be assigned by a Party without the prior written consent of the other Party. Any attempt to do so will be void. Subject to the preceding, this Agreement is binding upon, inures to the benefit of, and is enforceable by the Parties and their respective successors and assigns. Customer agrees to notify Utility in writing upon the sale or transfer of the Customer Facility. This Agreement shall terminate upon such notice unless Utility consents to an assignment.

15. Severability

If any provision of this Agreement is determined to be partially or wholly invalid, illegal, or unenforceable, then such provision shall be deemed to be modified or restricted to the extent necessary to make such provision valid, binding, and enforceable; or, if such provision cannot be modified or restricted in a manner so as to make such provision valid, binding or enforceable, then such provision shall be deemed to be excised from this Agreement and the validity, binding effect, and enforceability of the remaining provisions of this Agreement shall not be affected or impaired in any manner.

16. Signatures

The Parties to this Agreement hereby agree to have two originals of this Agreement executed by their duly authorized representatives. This Agreement is effective as of the later (or latest) of the dates set forth below.
