

An AEP Company

BOUNDLESS ENERGY™

ARE YOU LOOKING TO INSTALL A NEW PLUG-IN EV CHARGER AT HOME?

I&M has a \$500 incentive and discounted off-peak charging rates for residential PEVs in our Indiana service area.

I&M customers buying a new PEV in Indiana looking to install a new Level 2 charger are now eligible.

I&M's incentive helps offset the cost to install a new Level 2 charger and submeter to measure off-peak PEV charging.

This allows PEV charging from 11:00 pm to 6:00 am daily to be discounted 30% from our standard residential per kWh rate.

To make PEV charging safe and seamless, [I&M has partnered with HomeServe](#) to provide turnkey support for the retrofit electrical work along with a [PEV Charger and Wiring Protection Plan](#).

To receive the incentive and discounted PEV charging rate, you must submit [your application](#) to I&M.

Once your application is approved, you must work with HomeServe or a licensed local electrical contractor to:

Verify all applicable local licensing, permitting, installation and inspection requirements

Install an approved meter socket outdoors between the electrical panel and current PEV charger

Provide evidence of an approved local electrical inspection to I&M

Once I&M has evidence of the approved local inspection for the new PEV charger and meter socket work, they will install the submeter, activate the discounted off-peak billing, and pay you the \$500.

For more information on I&M's PEV programs, please contact:
