

HAVE YOU ALREADY INSTALLED A PLUG-IN EV CHARGER AT HOME?

I&M has a \$500 incentive and discounted off-peak charging rates for residential PEVs in our Michigan service area

PEVs registered in Michigan to customers after January 20, 2020 that have installed a Level 2 charger are now eligible

I&M's incentive helps offset the cost to retrofit your current charger configuration to measure off-peak PEV charging

This allows PEV charging from 11:00 pm to 6:00 am daily to be discounted 40% from our standard residential per kWh rate

To receive the incentive and discounted PEV charging rate, you must submit [your application](#) to I&M. Once your application is approved, you must work with a licensed local electrical contractor to:

Verify all applicable local licensing, permitting, installation and inspection requirements

Install an approved meter socket outdoors between the electrical panel and current PEV charger

Provide evidence of an approved local electrical inspection to I&M

Once I&M has evidence of the approved local inspection for the retrofit work, we will install the submeter, activate the discounted off-peak billing, and pay you the \$500.

For more information on I&M's PEV programs, please contact:
